Stubblebuster

A quality protein block for sheep and cattle grazing stubble or dry pasture

Exclusive to Nutrien Ag Solutions

STUBBLEBUSTER is Australia's largest selling dry feed block, mainly designed for summer grazing of stubble and dry pasture.

This block is balanced with protein combinations of urea, natural protein meal as well as essential minerals.

Sheep and cattle will clean up stubble and dry feed in paddocks, simply by feeding out this product.

Make the most of your dry feed with STUBBLEBUSTER. Why waste money on grain and high-cost feeds, when you can utilise valuable stubble paddocks, or dry feed areas that would otherwise be of little value?

The nutritional benefits associated with feeding high quality proteins and minerals allows stock to consume and digest more of these dry forage sources than would otherwise happen. STUBBLEBUSTER increases rumen stimulation, which in turn increases dry pasture digestion. Cattle and sheep will shine on STUBBLEBUSTER!

Typical Analysis*

Natural Protein /Protein Meal	200g/kg	20.0%
Total min. crude Protein	60g/kg	6.0%
Total equiv. crude protein	260g/kg	26.0%
Urea	100g/kg	10.0%
Molasses	50g/kg	5.0%
Salt (NaCl) Min	500g/kg	50.0%
Salt (NaCl) Max	560g/kg	56.0%
Phosphorus (P)	10g/kg	1.0%
Sulphur (S)	25g/kg	2.5%
Calcium (Ca)	50g/kg	5.0%

Note: The above analysis represents the constituent ingredients and relative proportions of the typical product only. Actual constituent ingredients and relative proportions may vary from that outlined above.

Pack Size | 20kg Blocks

Average Consumption

Cattle	4 blocks per 100 head for 7 days
Sheep	3 blocks per 100 head for 20 days

Urea Warning: This product contains Urea that may be harmful to animals if not properly administered. Do not feed to starving animals or animals in poor condition. Make sure that a bulk roughage is always available when feeding this product. Rain may cause this product to deteriorate. Do not feed out other Urea products while feeding this product.

Replace immediately when consumed.

Note: Average block consumption will increase in highly phosphate deficient areas and with poor quality feed.
